Mideast Solutions
Web-based Enterprise Solutions

ABOUT US

Since 1996, Mideast Solutions' team has been designing, developing and maintaining websites for businesses ranging in size from large corporations to governmental organizations as well as small businesses.

In 1999 we expanded our service list to include shared and dedicated hosting services and for large and small businesses. Located in Ontario, Canada, we service all over the world!

We bring together talented professionals with ideas and expertise to provide solutions unique to each of our web site projects. The designers, developers and marketing experts at Mideast Solutions possess over years of knowledge and experience, guarantees our clients do receive the highest quality, performance and functionality for their Internet, Intranet and extranet sites.

Our solutions are based on a combination of the latest technology, hi-tech equipment, comprehensive business experience and competitive rates.

HOSTING SERVICES

When deciding to build a website, a company's first natural instinct is to try and host the site internally. This requires on-site staff who are well educated in the areas of Internetworking, web server management, Internet security, and much more. It also requires getting the right Internet connections (and paying for them).

Mideast Solutions' hosting services allow you to safely host your website in our managed, secure data center facilities located on the Internet backbone right at downtown Toronto.

Bringing your hosting to our managed data center saves you time and money by enabling you to instantly take advantage of our running servers, established connectivity, secure facility and trained personnel.

You can retain control over your own website data while enjoying the following benefits:

- 24/7/365 IP and Port monitoring
- Multiple redundant OC-3 connections to Verio, Cable & Wireless , AT&T Trough GT/360 Network
- 100 Mbps Full Duplex connection.
- UPS plus diesel generator backup
- Backup services with off-site storage
- Live Monitoring Report and Bandwidth usage control
- %99.9 Network uptime warranty

There is no way that an individual company can host a site internally for less money and with more reliability than we can - it's a matter of simple economics and experience.

Mideast Solutions' hosting facility can accommodate your needs whether you are looking to small shared hosting, dedicated server or an enterprise server cluster.

NETWORK

Our North American broadband fiber-optic network is one of the largest and most advanced on the world. We use seamless connectivity between 60 North American cities, including New York, Toronto, Chicago, Denver, Dallas, Miami, Los Angeles and Vancouver, and it's the only provider with a North American footprint, offering true North American coverage.

GT borderless integrated North American network architecture is the foundation for our comprehensive range of products and services including Internet, broadband, private line, local voice and long distance services. GT services over 10,000 mid-sized, large and carrier customers in the US and Canada.
Our leading IP infrastructure in Canada and the US includes:

- State-of the art technology delivers DWDM
- 10 Gigabit Ethernet wave and SONET switching
- Robust IP backbone offering superior Internet performance
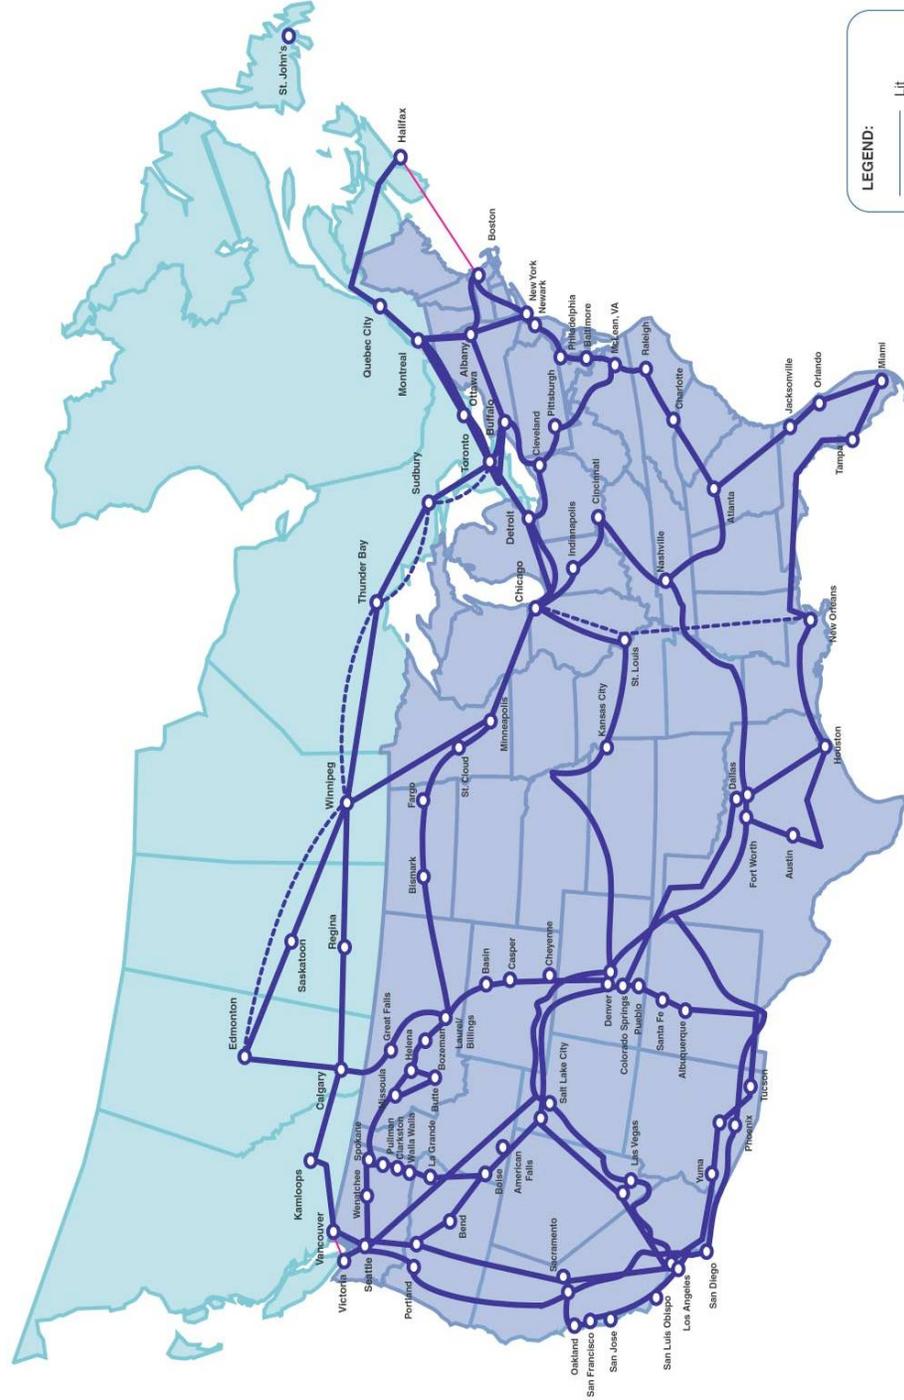

The strength of our network:

- Spans 44,000 route miles (70,000 km)
- North-South connectivity (8 routes) and East-West connectivity (5 routes)
- Connects more major cities in North America
- Presence in over 60 major metropolitan areas in North America
- Over 2000 Metro Pops
- Broad and innovative service capabilities
- Service guarantees
- Multiple route diversity options
- Scaleable and flexible to develop tailored solutions
- Internet backbone is one of the best in North America, with over 200 peering relationships

NETWORK MAP

FACILITIES

Mideast Solutions' server room is located inside GT Group telecom (360Networks) data center at Toronto, Canada. This Data Center is a Carrier Class Tier One Data Centre.

- Features of GT Group Telecom Data Center:
- Direct DS-1 to OC-192 links to over 2200 points of presence in 17 markets across Canada - including key office buildings and most major hotels - on our own national fiber-optic backbone
- State of the art packet-switching architecture using Dense Wave Division Multiplexing (DWDM) for ultra high throughput, integrated with SONET™ technology for assured network speed and reliability
- BGP4 peering services Network management by Group Telecom's operations centre 24 hours a day, seven days a week
- Guaranteed bandwidth on demand, so Your Company's data traffic can grow without practical limits
- Gigabit Ethernet services to integrate with existing standards for high-speed networks
- 24/7 Security Monitored Facility with multiple keyless entry, motion detection, and video surveillance
- A Cisco Powered Network™ featuring fully redundant core routers and switches

- Triple redundant, power, battery and diesel generators for maximum power availability, even during times of city-wide power outages
- State-of-the-Art Fire Suppression system that automatically eliminates all oxygen from the air within 30 seconds of detecting smoke in the room where your website is being hosted

The Data Center also includes cabinets and cages that are placed in a secure environment with proper HVAC (Heating, Venting and Air Conditioning), fire protection and DC/AC power as well as backup power. 120V AC power is delivered in 15 amp increments over redundant power feeds to support equipment located in the customer's cabinet or cage. Redundant systems include UPS, back-up battery and back generators. GT/360 meets the growing demand for server co-location services by leveraging their high quality connectivity to the Internet, robust core network design and strategically located data centers.
